

Software Testing

Course ID: IT207DE01

Lecturer: Bùi Ngọc Lê

Email: le.buingoc@hoasen.edu.vn

Assessment Methods:

Group exercise

Objective

- The aim of this project is to allow students apply the software testing process on a real software product.

Description

- Assume that you work in a software development company that develops different types of software applications including games.
- Your manager assigned you to work in a group to perform software testing for one of the games.

Project	Game Name	Details
Project 1	Domination	http://domination.sourceforge.net/
Project 2	Nullpomino	https://github.com/NullpoMino/NullpoMino
Project 3	JSoko	https://sourceforge.net/projects/jsokoapplet/
Project 4	Infinite Tux	https://github.com/qbancoffee/infinite-tux
Project 5	YSoccer	http://ysoccer.sourceforge.net/

Tasks of the groups

- 1. Choose one project from the list.
 - Run the game and try to play the game; this helps you understand how the game works.
- 2. Test Plan
 - Prepare a Test Plan for adequately testing the selected game. Use the IEEE test plan template and check the provided rubric.
 - Make sure to plan your testing using as many different techniques as possible.

Tasks of the groups

• 3. Test Cases

- You are required to design and prepare detailed test cases for all the type of tests that you have planned earlier.
- The following is required:
 - A detailed list of specifications (in a tabular format) of your selected test cases for each type of testing.
 - What techniques/methods did you use to design the test cases? Justify

Test Case ID	Testing Type	Test Scenario	Steps	Expected Result	Notes
TC-01	Boundary Value	Check the boundary for the age range field (assuming 18-60).	Enter age = 17 and age = 18.	Errors are reported at age 17; they are accepted at age 18.	
..	..	..	..	..	..

Tasks of the groups

- 4. Test Execution
 - Execute the test cases that you designed in Task 3 and make sure to include the following
 - The Junit/testing code (if any)
 - The integration testing code (if any)
 - The testing report (Pass/Fail) for all created test cases
 - A Code Coverage Report

Submission

- One team member is required to upload a copy of the solution on Moodle before the specified deadline for each phase:
 - Task 2 is due on: 22/05/2026
 - Task 3 is due on: 05/06/2026
 - Task 4 is due on: 19/06/2026
 -

Assessment methods

- Task 2: 20%
- Task 3: 40%
- Task 4: 40%

Q & A
